AI BUILDER CUP 2026 · MEDIA, CONTENT & DIGITAL EXPERIENCES

promoflow.

Turn a product's context, screenshots and demo recording into a 15-second, scroll-stopping vertical reel.

[Team name] · [Member 1] · [Member 2] · [Member 3]

THE PROBLEM

Product teams know a 15-second reel can sell their app. Making one every week is the part they can’t keep up with.

01

Writing a hook that stops the scroll in two seconds

02

Cutting a screen recording into captioned steps

03

Re-editing a 9:16 cut for every variant they want to test

The format that works: five beats in 15 seconds

2.5 s

Hook

Reaction clip, a quoted line and a twist

1 s

Proof flash

Screenshot collage under the same captions

4 × 2 s

Demo steps

Numbered cuts with yellow captions

3 s

Payoff

The result, over the proof collage

Caption

CTA

In the post caption, or an optional end card

PromoFlow builds every beat from what the team already has. Nobody has to film or edit.

Three inputs in. One reel out.

Product context

Name, audience, the pain it removes, the result, key features

Screenshots

App screens and results for the proof collage

Demo video

An MP4, MOV or WebM screen recording

OUTPUT

A 9:16 reel and its post caption

Hook, proof flash, four captioned demo steps and a payoff. Previewed in a phone frame and exported as WebM or MP4.

Every step is a block you can edit

INPUTS

Product context
Name, pain, result, features

Screenshots
App screens and results

Demo video
Screen recording

AI BLOCKS

Script writer
Hook, twist, 4 steps, payoff, CTA

Hook clip
AI reaction clip or your face

Proof collage
Screenshots tiled into a grid

Demo cutter
One captioned clip per step

OUTPUT

Reel composer
Orders the scenes, shows the timeline, previews and exports the 9:16 reel with its caption

One click runs the whole flow

01

Add inputs

Drop in product details, screenshots and a screen recording.

02

Press Run

Blocks run dependencies first, each showing a spinner, then a check. Run stops at the first missing input and selects it.

03

Tweak

Edit any script line; your edits survive a rerun. Duplicate a block to build an A/B variant.

04

Export

Preview in a phone frame, then export WebM or MP4, with an optional CTA end card.

Typed wires keep the flow valid: an output only connects to an input of the same type.

Google AI does the creative work

Gemini 3.6 Flash

Hooks

Writes four alternative hooks for an angle (problem, curiosity, POV or bold) as schema-checked JSON.

Grounded: only facts from the product context. No invented metrics, testimonials or pricing.

Veo 3.1 Fast

Reaction clips

Generates a 4, 6 or 8-second vertical hook clip from a prompt, optionally starting from a still image.

Clean frames: no text or logos in the clip; the composer adds the captions.

Headless Chromium

Site capture

Paste a product URL; it pulls the title, headings and screenshots in as context for Gemini.

Safe by default: private and reserved IP ranges are blocked.

These run as server endpoints today. The canvas blocks still use mock output until they are wired in (slide 9).

Built to run on Google Cloud

Client

Browser app

- Block canvas and inspector
- Media kept in IndexedDB
- Reel drawn to canvas, exported with MediaRecorder

asia-southeast1

Cloud Run

- Node API: context, hooks, video, status
- Chromium for site capture
- One Dockerfile, 2 GiB

Gemini API

Google AI

- Gemini: structured hook JSON
- Veo: long-running jobs the client polls

Secret Manager

Holds the Gemini API key and injects it into Cloud Run.

Guardrails

At most two captures at once, request size limits, no private URLs.

Where the build stands today

Working now

- Full inputs → script → clips → reel flow on the canvas
- Real uploads, preview and WebM/MP4 export in Chrome and Edge
- Gemini, Veo and site-capture endpoints on the server
- Cloud Run container with the key in Secret Manager

Next

- Swap each mock AI block for its Gemini or Veo call
- Server-side rendering, so export works in any browser
- Accounts and shared, multi-user project storage
- [Your next milestone]

Built for teams without a video editor

Indie founders

Ship a launch reel the same day as the feature.

App marketing teams

Test hook variants side by side from one set of inputs.

Agencies and creators

Draft client reels at volume, then polish the best ones.

BUSINESS MODEL

[Free flow with your own uploads; paid credits for Gemini and Veo generation at $__/month]

MARKET
